All recharge agents are providing recharge with the help of separate operators recharge SIM. In that SIM they have to keep the separate balance and they can recharge for only few operators. With the help of our single sim recharge api you can perform mobile, DTH and data card recharge for different operators through a single sim.API for Mobile Recharge is quick and easy recharge api. Any skilled programmers can easily integrate this mobile recharge api using our API manual. We support all mobile, DTH and data card recharges in sim single API. So all mobile recharge, DTH recharge and DATA Card recharge will work with a single Mobile recharge API. We offer Free Mobile Recharge API integration services with our enterprise solution. We also offer Master Mobile Recharge API Development in India. If any mobile recharge company required any api development. With a master API, any company can start their own mobile recharge api business in India. Multiple API's can be integrated in system and API administrator can easily switch these api between operators. The recharging facility is provided by us through B2B and B2C portal and also through white label. B2B: We have the option of recharging with all major operators. Lucrative commission and attractive offers are also striking features. It can track all the bookings and accounting details of your transactions. Instant confirmation is received after the recharge is completed. B2C: The customers can recharge their prepaid mobile, DTH by following few easy steps. A confirmation is received once the recharge is done. They can also have an access to different recharge plans and schemes made available by different operators. Recharge API facilitates anytime, anywhere recharge of prepaid mobile, DTH and data card through mobile. The “Single Sim Multiple Recharge” feature saves you from maintaining separate stock for each mobile operator. It needs to have a computer and internet connection if we are recharging through online. A simple API will give you the power to provide online, easy recharge to your customers for 15 major mobile operators like Airtel, Aircel, BSNL, Idea, Loop, Reliance GSM, Reliance CDMA, STel, Tata Indicom, Tata Docomo, Virgin Mobile, Videocon, Vodafone, Uninor & MTS. FEATURES IN MOBILE RECHARGE SOFTWARE · Single Mobile Recharge Application supports more than one Mobile Recharge API.· Online Recharge for All DTH provider with DTH Recharge API· Easy to navigate fund summary page.· Mobile Application for JAVA and Android· Mobile friendly website.· 24 x 7 Instant Recharge· Single balance for all services.· Check current balance.· Recharge all mobile/DTH/Data card through single sim.· Receive success, failure or pending message within a few seconds.· Single accounts for all recharge.All the advantages of multiple recharges for multiple providers can be done through a single SIM. Yes, that is right! A single SIM! All you need is one account and one mobile. There is no need for multiple accounts or to learn any new system. All it takes is one easy SMS request to be sent to a virtual number. This virtual number will send the request to our server which will process it and act instantly. Once the recharge is done, our unique server will send the confirmation number also via SMS to the user. This reduces the chances of fraud or mistakes that can occur.
